

Stoller Enterprises, Inc.

TECHNICAL INFORMATION

ROOT FEED I

9 % amine nitrogen (N), 7 % calcium (Ca), 1.5% magnesium (Mg), 0.1 % boron (B)
contains biologically active growth enhancers

Stoller's Root Feed is an incredible product that addresses the need for calcium acting as a second messenger in expressing genes that are needed for good yield, and abiotic and biotic tolerance. Calcium is the mineral that does the work when hormones such as auxin demand the energy for plant cell division and cell growth as is needed in effective fruit development.

The calcium in Root Feed is highly available and works in concert with the plant hormone auxin to produce good quality fruit.

Root Feed needs to be used on a bi-weekly (every 2 weeks) basis at the rate of 2 gallons per acre equivalent.
