### **DESERT MIX**

Zn 2.1%, Fe 1.25%, Mn 0.5%, Mg 0.7%, Cu 0.4%

(with natural growth stimulants)

*Unique Liquid Acid Nutrient Fertilizer Supplement For Foliar And Soil Application*

*Desert Mix* is a foliar or soil-applied micronutrient and is non-phytotoxic when used as directed.

*Desert Mix* is completely available and absorbed by the leaf surface or the root system because of the natural complexing properties of its phenolic acid chelating complex.

*Desert Mix* is an excellent acidification agent when applied with other foliar spray chemicals.

*Desert Mix* is a valuable supplement to soil fertilizers. Even in ideal conditions soil nutrients can become 'locked up' and unavailable to the plants roots. In adverse conditions growth, yield and quality is reduced by poor soil conditions, drought, water-logging, and pest and disease damage.

*Desert Mix* feed the plant when the roots cannot.

*Desert Mix* is recommended on the following crops: Alfalfa, almonds, avacodos, apples, pistachio, barley, all beans, broccoli, cabbage, cauliflower, carrots, celery, citrus, corn, grapes, lettuce, milo, melons, nec-tarines, rice, pears, peaches, pecans, peppers, peanuts, potatoes, sorghum, soybeans, sugar beets, sweet corn, sugar cane, strawberries, tomatoes, turnips. walnuts, watermelons, wheat and most other crops

#### **Benefits of Desert Mix include:**

- 1- High levels of micronutrient
- 2- Nutrients in easily absorbed form
- 3- Corrects transient deficiencies
- 4- Stimulates new root growth
- 5- Increased flowering
- 6- Improved fruit quality

*Desert Mix* effectively reduces transient deficiencies during vigorous growth, flower and fruit development – allowing the plant to achieve its maximum potential.

#### **Recommendation:**

Foliar spray 3 to 5 liter per hectare or add through drip irrigation system when plants have 3 to 4 true leaves. Repeat application every 7 to 14 days as needed.

Or Foliar spray 300 to 500 ml/100 liter of water. Repeat application every 7 to 14 days as needed.

*Desert Mix* is an acid product. When sprayed with pesticides, fungicides and post-emergent herbicide, better activity is received with each product. In addition, *Desert Mix* makes herbicide damage to plants much less apparent.
